

Apulia RIS3 Monitoring System

THIRD MEETING OF THE RIS3 MONITORING GROUP

Barcelona, 6 July 2017

Jennifer Grisorio

Progress made through the RIS3 Monitoring Working Group

- Confirmation about the methodological approach relatively to the typology of indicators to be used for RIS3 monitoring.

Actions implemented from February 2017 to July 2017

- Implementation of the data gathering process through on-line questionnaires for two regional calls (Innonetwork and Innolabs)
- Better definition of the questionnaires contents
- Clearer design of the stakeholders involvement in the monitoring process
- Definition of transition indicators for the agrofood innovation value chain

Next steps

- Preliminar analysis of data of participation to the two regional calls
- Definition of a clearer matrix connecting regional policies, objectives and indicators

Remaining doubts

- How to identify the members (non-beneficiaries) to the innovation value chains
- How to collect the information necessary for transition indicators even for non-beneficiaries
- How to gather - through the questionnaires for beneficiaries and the survey for non-beneficiaries - information about non technological innovation
- Qualitative approaches for monitoring RIS3 effectiveness

Questions to peers

- Priority/specialization areas identified in your RIS3 and indicators selected to measure their effectiveness
 - Approaches and methods for gathering the data necessary for indicators construction
 - Suggestions about qualitative approaches to be used for monitoring.
-
