

High Performance Production through 3D Printing

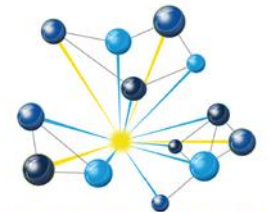

VANGUARD INITIATIVE
New growth through smart specialisation

S3P IM 3rd Steering Group
Rovaniemi – 12 April 2018
Wim De Kinderen – Brainport Development

1

Regional Commitment and Governance

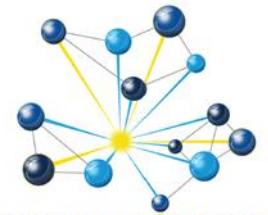

VANGUARD INITIATIVE
New growth through smart specialisation

regional commitment and governance

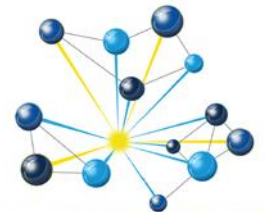

- regional authorities (strongly) committed, but on a Vanguard Initiative level; formal agreement through signature of VI's "Milan Declaration" and membership of VI association
- commitment on a Pilot/Partnership level not needed at the moment, more communication to these authorities specifically is needed and planned
- co-lead regions meet in Board and share (financial) risks
- (core) stakeholders commitment on level of governance (Steering Group) and (all) mostly via activities (plenary, democase specific)

VANGUARD INITIATIVE

2

Analytical Work and Support Services

VANGUARD INITIATIVE
New growth through smart specialisation

analytical work and support services

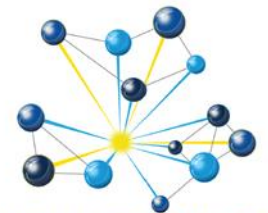

- mapping template was completed by stakeholders involved at the start, and expanded and updated few times afterwards.
- mapping info (VC actors, but also priorities and capacities) not exploited to the maximum of its potential; a tool allowing more easy permanent updates by regions/stakeholders and allowing to (semi-automatically) find collaboration opportunities would be a big help
- 8 domains (type : automotive, health, machinery&tooling, etc) in the 3D printing field identified
- stimulate additional participation by industry and stakeholders by clear communication on added value of participation, and – especially – by having the fitting (financial) support framework available (main bottleneck to move from ‘connect’ to ‘demonstrate’ phase)

New growth through smart specialisation

3

Investment Projects – types of instrument

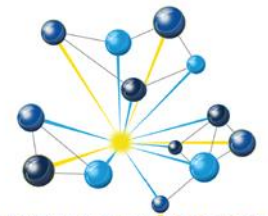

VANGUARD INITIATIVE
New growth through smart specialisation

investment projects – type of instrument

- investment project ideas are present and calculated in one particular DemoCase; and will in general be more available and detailed as result of collaboration projects involving demonstration facilities, since they will clarify the need for facility/equipment upgrades and building
- appropriate type(s) of financial instruments : mix of public and private (see VI “3 layer model”)
- DG Regio Pilot Actions are expected to contribute to the articulation (support in business plan development) and the replication/upscale of smaller scale successes in some DemoCases (stimulating regions to contribute)
