The economic role of the public sector

Different roles of the public sector to drive innovation

Different types of Public Procurement

A pioneer health experience in Galicia

- Health is one of the most relevant areas for public procurement
- Pioneer public procurement health experience in Galicia
- Health is a regional competence. The Galician budget for health is of €3,400 million in 2017, representing more than 40% of the total budget
- Ageing challenge and Smart Specialisation Strategy as opportunity. Old people (> 65 years): 23% in Galicia
- 2 main public procurement plans 2012-2015 InnoVAHealth and Hospital 2050 (H2050) funded by 90 million from the ERDF. They were followed by Código 100 (2016-2019), with a budget of 13 million.
- Main drivers, barriers and policy learning

Insights on public procurement

- **Public procurement shows several advantages, but also faces challenges and difficulties for its implementation**
- **Public procurement may drive innovation**
- **Identification of needs and its transmission are key**
- **Capabilities of the productive sector are key**
- **To take more advantage of this tool, it is needed a systemic policy that considers demand and supply sides, as well as coordination among stakeholders (such as cooperation between the public and the private sectors)**
- **Relevance of building competences and learning for new experiences**
- **The role of public procurement may be even more crucial in less innovative regions. However, those regions may lack appropriate competences and capabilities for these advanced policy tool**
- **Benchmarking in order to provide good and bad practices and suggest policy recommendations to increase the effectiveness**

**Many thanks for your attention
Comments, questions and
suggestions are welcome**
