

Context and objective

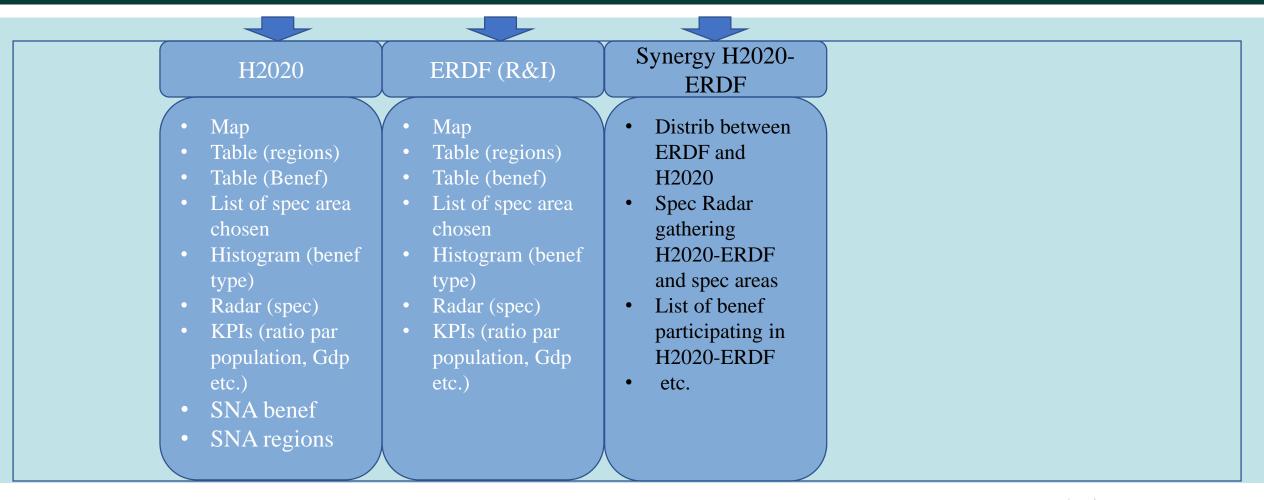

There is a lack of indicators at regional level which is hampering the monitoring & evaluation (and update) of S3

- Design of regional dashboard based on H2020 & ERDF projects dataset to Support to policy makers in the evaluation and update of their S3 strategies in
 - 1. Monitoring synergies between EU funding within specialisation areas
 - 2. Measuring the alignment of the R&I project allocation with their Smart specialisation strategies
 - 3. Benchmarking region with others
 - 4. Better Identifying key players and other Europeans ones

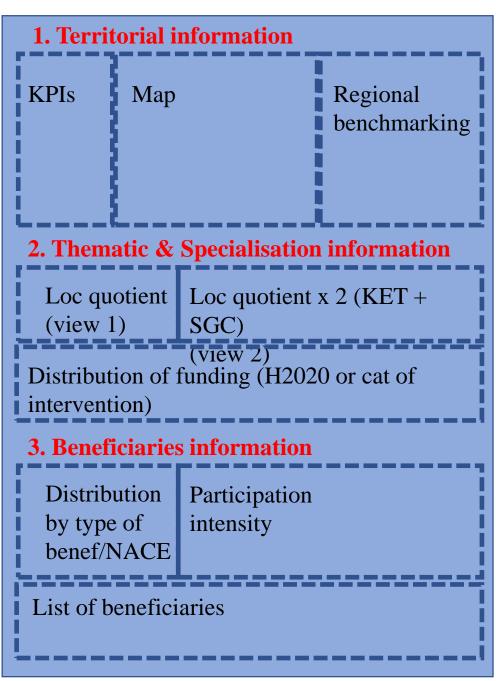

The objective is <u>not to provide</u> an exhaustive monitoring of what has been allocated or captured in a given region

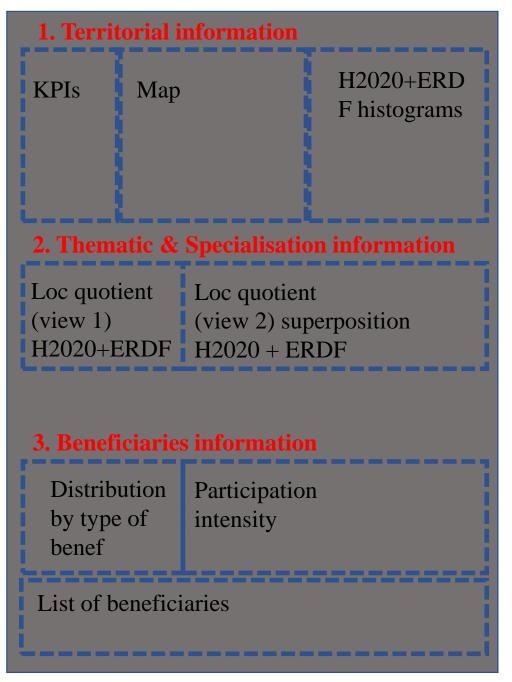

Update of the S3platform R&I viewer Simplified view of the Dashboards

Main features

- Comparison of territorial information and indicators on
 - ➤EC projects funding information (ERDF and H2020) at NUTS 2 level
 - ➤ Specialisation indicators in the main technological (KETs) & policy areas (Societal grand challenges)
 - > Beneficiaries
 - ➤ Synergies between H2020 and ERDF

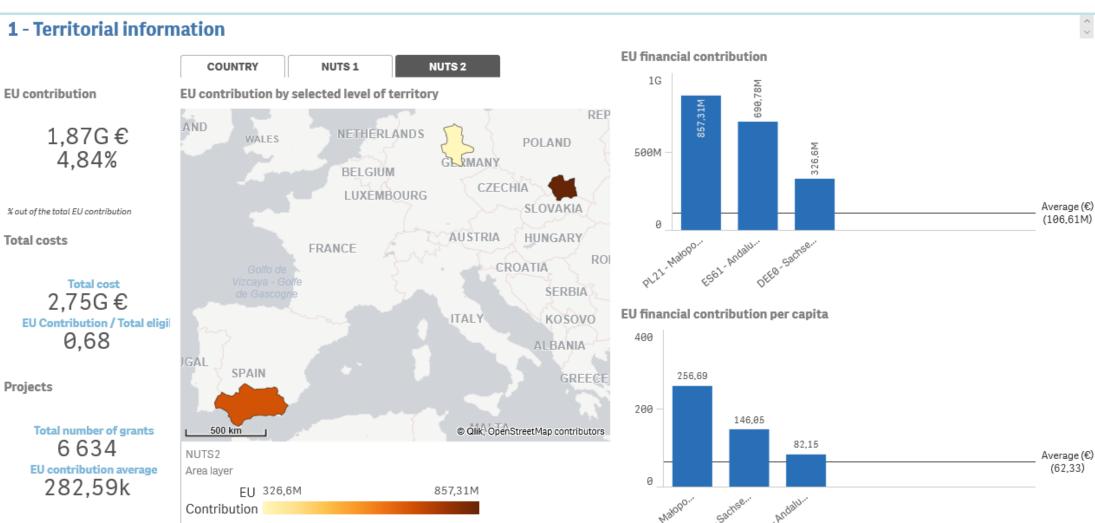

Focus on the taxonomy used

- 6 Key industrial competences as defined in H2020:
 - 4 key enabling technologies (nanotech, adv. material, industrial biotech, adv. manufacturing & proc.)+ ICT and Space
- 7 grand challenges (Health, Agrofood & bioeconomy, Energy, Transport, Environment & climate change, Inclusive society, Security)

60 % of H2020 funding is channelled through these 13 categories. The taxonomy offers a technological & a policy coverage which can be covered either by H2020 or ERDF

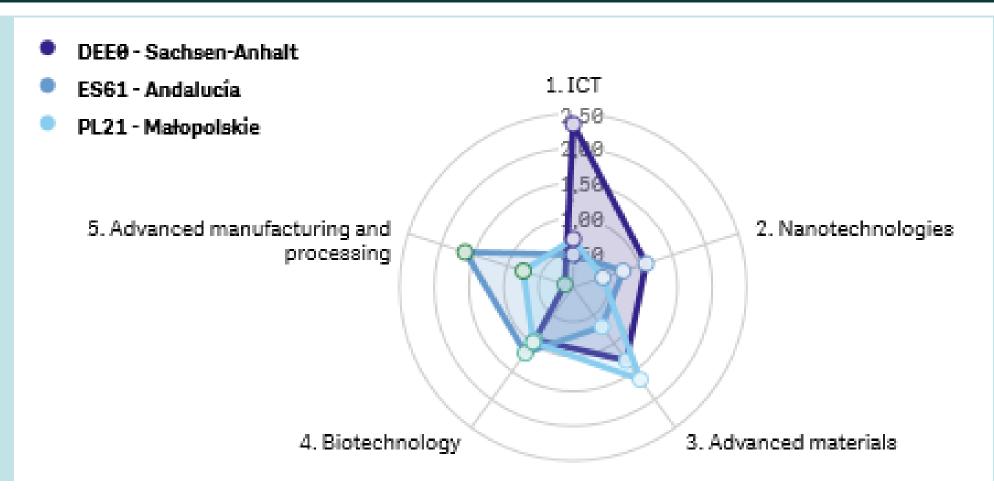

Comparison between regions (Funding allocation)

European Commission

Comparison between regions (Technological areas)

If LQ(i)<1: the area (i) is under-covered compared to the distribution reference (whole territories participating in H2020)

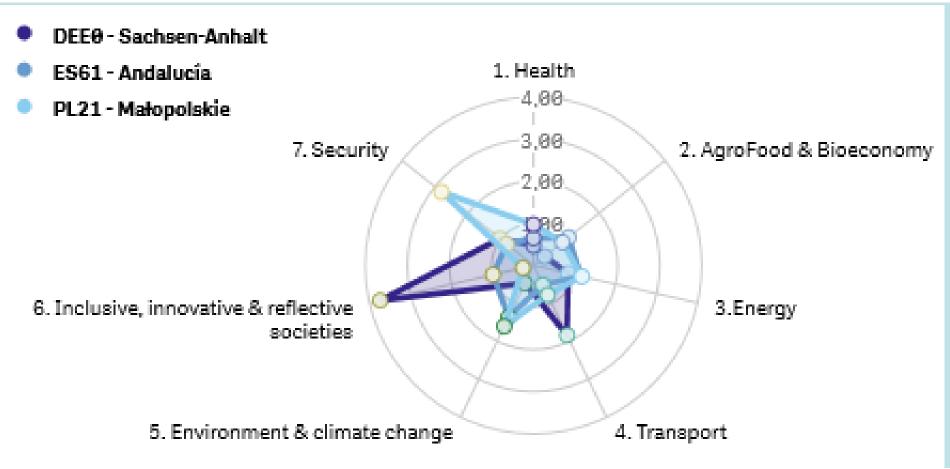

If LQ=1: the coverage correspond to the reference

If LQ>1: the area (i) is over-covered compared to the reference (specialisation sign)

NOT A PERFORMANCE INDICATOR

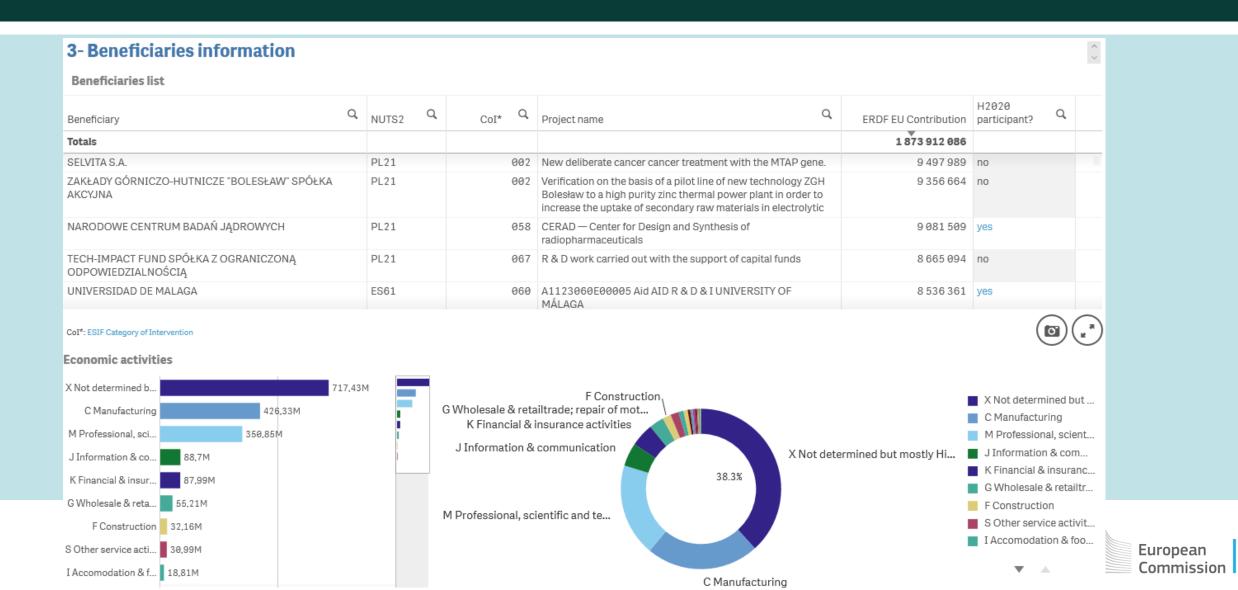

Comparison between regions (policy areas)

- If LQ(i)<1: the area (i)
 is under-covered
 compared to the
 distribution reference
 (whole territories
 participating in H2020)
- If LQ=1: the coverage correspond to the reference
- If LQ>1: the area (i) is over-covered compared to the reference (specialisation sign)
- NOT A PERFORMANCE INDICATOR

Beneficiaries information
