Ponent: socioeconomic problems

- Agro-food system: **fragmented structures**, large number of small-scale **family producers**, **diversified** farming activities.
- Low income, aging and the pressures to which the sector is subjected are causing the abandonment of many farms.
- Young generations do not find attractive jobs and leave the rural territory.
- Large speculative companies take over land and farms for investment and resources exploitation.
- Projects to address these challenges (>100 projects & >51M€ in 2014-2020) are fragmented, isolated and misaligned.

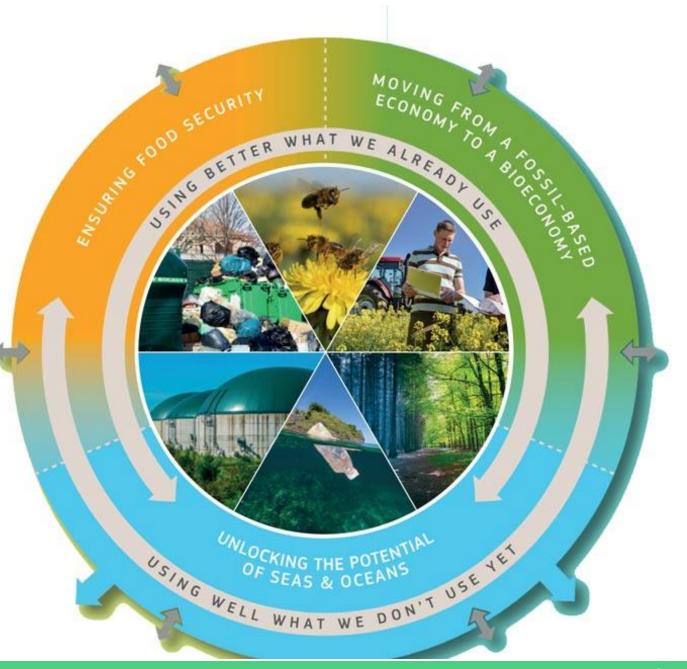

The new productive model promoted globally is seen as a great opportunity (**perhaps the only one**) to build effective solutions. The alternative to this change is a depopulated territory, used by big companies as a source of resources and as a recreative area for urban inhabitants.

The challenge in the territory

To transform current production and consumption models towards the **green and circular** economy model based on **local resources** to capture social, economic and environmental value for sustainable, inclusive and prosper development of rural communities

Complex challenge that requires a systemic approach

The TOOL

SHARED AGENDAS FOR SUSTAINABILITY AND SOCIAL CHANGE **1.** Understand the challenge and prepare the basis for collective action

2. Co-design and test innovative solutions through a shared agenda

3. Achieve systemic impact: advance towards the shared vision

biolab.ponent

FROM LOCAL NEEDS TO GLOBAL OPPORTUNITIES 1.1. Delimit the challenge in the territory
1.2. Create an advocacy group
1.3. Define a shared future vision
1.4. Define a shared future vision of the current situation
1.5. Specify the priorities of the agenda
1.6. Establish an initial governance model

2.1. Co-design and test new solutions to the problems identified

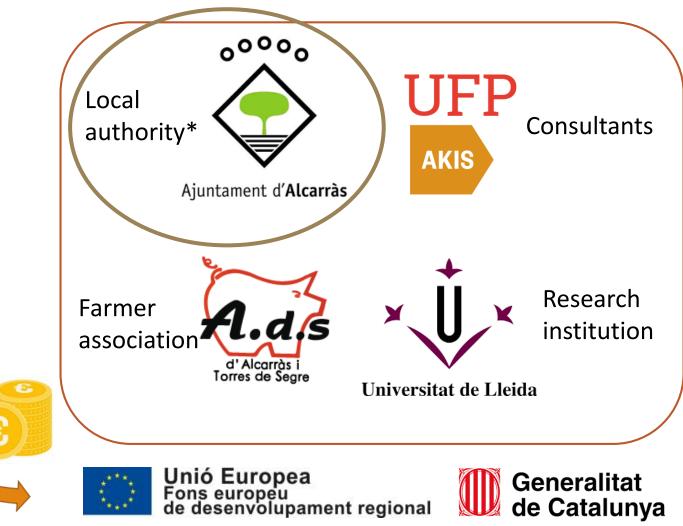

3.1. Reproduce and scale up the solutions

Involve relevant actors and strengthen their commitment to the shared future vision Develop the governance model and support tools for collective action, monitoring and strategic learning

1.1.Key actors committed to change and initial advocacy group (2017)

*Alcarràs is one of the largest municipalities in the area, regardless of the capital Lleida, with about 10,000 inhabitants.

1.2. Co-developing a shared future vision (2018)

33 participants: 10 local authorities, 5 researchers, 12 SME, 6 farmers associations

LOCAL

ADMINISTRATIONS

Based on a model of green and circular economy, respectful of the environment, the territory optimizes the use of endogenous resources to produce food, energy, goods and services within the framework of a model of sustainable, inclusive and welfare development.

Renewable energies

New technolog

1.3 and 1.4. Co-developing a shared vision of the current situation, the problems and their causes (2019)

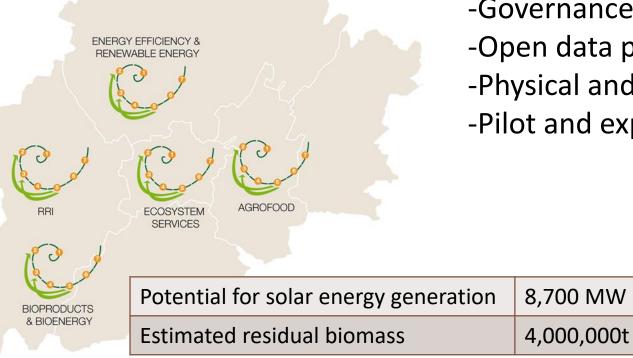

60 participants: 14 local authorities, 10 researchers, 24 SME, 6 farmers associations, 1 financial entity, 5 regional authorities.

b

1.5. Identifying the opportunities on which action is possible

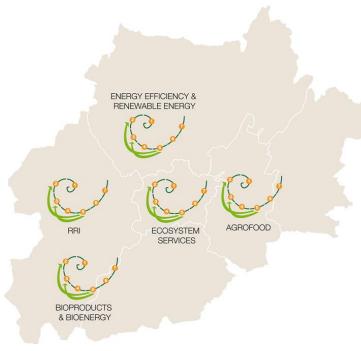

-Governance model

-Open data platform for local resources
-Physical and virtual spaces for collective action
-Pilot and experimental facilities

2. Co-designed innovative solutions

- Training of local innovation agents ٠
- European Union European Social Fund
- Pilot plant for the treatment of lignocellulosic biomass **RIS3CAT** ٠
- Design of a territorial biorefining system (logistic aspects) ٠
- Communication strategy for awareness ٠
- Creation of the worktable for energy transition ٠
