Värmland RIS3 approach and impact assessment

Design of the Värmland RIS3:

- Vision driven
- Recognition that external trends and other changes in the conditions have a major impact on how we succeed in achieving the visions.
- In line with EDP – the path towards the vision can vary
- There fore in the strategy we only have proposals on activities that lead to the vision.
- Impact assessment in relation to the visions of the smart specialisations

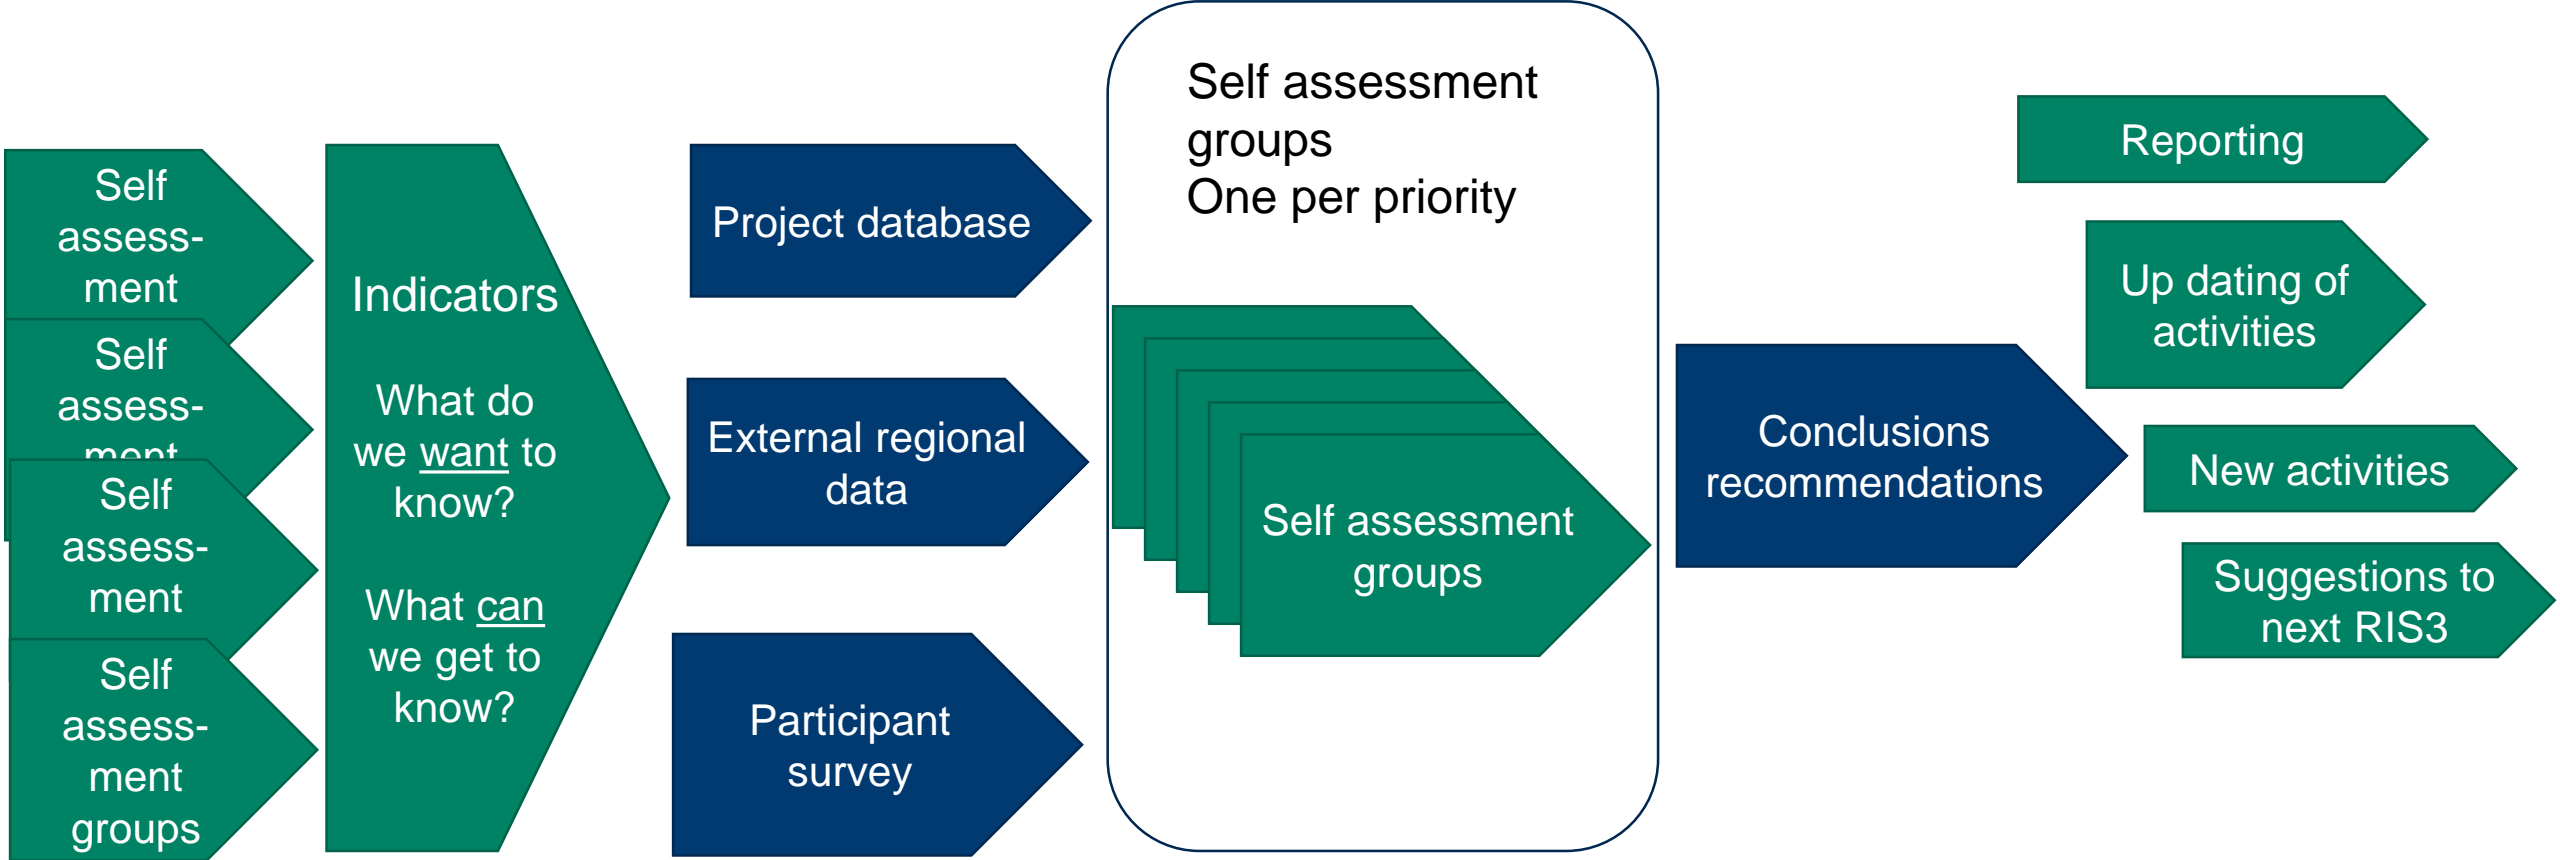

The vision of the highest prioritised specialisation Forest Based Bioeconomy:

“With a more than 150-year-long history within paper manufacturing, we conceive creative meetings between tradition and renewal and show the way using bio-based innovations originating from the forest to foster a fossil-free and sustainable society.”

Followed by:

1. A description of the state in the region when the vision is reached.
2. Suggestions on what the triple helix actors should contribute in order to achieve the vision.

Co-creation of a process for monitoring – impact assessment

Co-creation of a process for monitoring – impact assessment – towards the revision of RIS 3
