# ***Riko Hiše – company presentation***

- production of high quality, individually designed, energy-saving and ecological wooden buildings
- a modern European company being capable to fast track adapting to any market and its individual characteristics
- middle sized company
- 60 employees
- turnover: Cca 8 mio EUR; compared to the whole Riko group which has turnover of approx. 100 mio EUR

# *Tradition*

The company originates from Ribnica, a town with a more than 500-year tradition in wood design and processing.

- in 1492 Ribnica inhabitants were awarded the emperor's patent to be able to sell homemade wooden products made from dried wood (known as dry goods)
- innovation and entrepreneurship of artisans
- artisans evolved from craftsmen into businessmen and exporters, and became known worldwide for their products
- feeling for working with wood as a material that can be shaped and formed into new, practical and aesthetic designs
- **Precious heritage that was generously passed on to us through time and also a great opportunity for the future.**

# ***Riko construction technology concepts***

- Riko houses are represented by a model example of knowledge and high-tech integration with the tradition
- construction technology conforms to strongest environmental regulations
  - meet high standards of sustainable building
  - are energy-efficient
  - allow complete flexibility as regards customer's demands and expectations
- the construction quality of Riko houses has been confirmed with the Technical Quality Certificates

# ***A comprehensive service tailored to our clients***

- each building is designed exclusively according to customers expectations and requirements and tailored to individual requests, needs and lifestyles.
- we provide a comprehensive service to our clients which uses cutting-edge technological solutions in all phases of planning and construction and which meet the highest standards of sustainable construction

# ***Commitment to wood***

- wood is an exceptional construction material and the most suitable material for building and designing living spaces
- it corresponds with all the concepts of sustainable construction:
  - eco-friendly
  - energy efficient
  - brings together excellent physical and mechanical characteristics
  - health-friendly
  - maintains a pleasant climate
  - regulates humidity
  - ensures high-quality living

# *Excellence in architecture and design solutions*

- a great deal of originality in the design, both of the interior and exterior
- wood has great value in a decorative sense
- offers many possibilities and solutions for realising design and architectural ideas when in combination with other materials
- the construction itself or a detail of it can represent an aesthetic and functionally perfected feature
- provides superior comfort of living tailored to the client's criteria

# *Challenge: noble deciduous trees*

*Exterior*

*Interior*
