

## S3P Agrifood on Traceability and Big Data

Encouraging the creation of an ecosystem to support innovation and digitization of the agrifood sector in Europe.

The T&BD partnership will allow the reinforcement of the collaboration between the capacities of the ICT innovation and the needs of the agrifood business communities, and will exploit the economic valorization processes of research results by developing new business models and market opportunities.

**Lead Partner: Andalusia**  
**Co Leader: Emilia-Romagna**

T&BD thematic partnership is mainly formed by regional governments who, together with clusters, private companies (TICs and agrifood sectors), knowledge agents (Universities, research centers, etc.) and social agents (i.e. consumers) form their regional nodes.

Four working areas are identified:

T&BD in the life-cycles of the value chain.

T&BD in the smart monitoring of the value chains to improve agrifood sector competitiveness.

T&BD to incorporate consumers' and different agents' experiences in food chain decision making processes.

T&BD in Open Data, interoperability, data governance and cyber security.
